

Smart meters Knowledge is power

We're upgrading homes and businesses in your community with smart meters.

We're dedicated to meeting your energy needs and taking steps to build a smarter energy infrastructure. Smart meters offer you convenience, more control and expanded choice in understanding and managing your energy use.

Smart meters use two-way wireless communication to securely enable detailed hourly usage information and meter status, so you can make informed decisions to get the most out of every energy dollar.

What can I expect with a smart meter?

Convenience

- Smart meters automatically transmit usage data, so the need for estimates, onsite visits and customer meter reads is greatly reduced.
- Smart meters help us pinpoint and respond to outages more quickly.
- If you move, smart meters let us stop and start service more quickly.

Understanding

- Our online Energy Manager tool will connect you with your energy use and customized recommendations to save energy. After your smart meter is installed, you'll have access to detailed energy use down to the hour to better understand how you're using energy in your home or business.
- EnergyTrack will send a monthly snapshot of your electricity use right to your inbox so you can make smart adjustments. Update your email address in My Account to make sure you don't miss out!
- Usage Alerts will be available in the future. After signing up, similar to our Meter Read and Outage Alerts, you can receive updates about your energy use, helping you manage changes and plan for your monthly energy bills.

Choice

- Detailed usage information and recommendations let you choose from ways to use less energy and potentially save money.
- Future smart pricing options will let you shift electricity usage to lower-cost times of day, so you may be able to lower your bills.
- Select from rebates and promotions on energy-saving products or explore renewable options.
